

# Unlock Vestibular Application

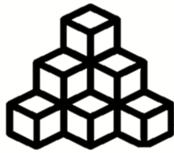

Three-Axis Wearable Adaptive Vestibular Stimulation

## Enhance and Expand your existing VR-based training workflow

Reduce Cybersickness

Increase Dimensionality

Simulate Disorientation

Novel interfacing with the vestibular system generates motion sensations without the need for motion-platform hardware

- Reduce cybersickness by re-coupling what you see + what you feel
- Simple user application: Four non-invasive adhesive electrodes around the head
- Groundbreaking electrophysiology techniques generate feeling of roll, pitch, and yaw motions
- Modular hardware and software can be customized to nearly any simulation and VR/MR environment

**“Luna Labs’ 3WAVEs System is an excellent solution to the ongoing issue of spatial disorientation.”**

-Capt Scott Kelly, USN, Ret, Former astronaut and ISS Commander

## How Can 3WAVEs Work For You?

Technology developed in partnership with Mayo Clinic
